ADVANTAGES

Travel and outdoor enthusiasts need RVs that can withstand the elements. Our deck panels are precision-engineered specifically for RVs to provide a stronger core, moisture resistance, and more stability for the long haul.

Our 1-sided sanded engineered panels afford the thickness tolerance requirement of components in the most precise applications. Our panels are manufactured with additional resins and wood to deliver extra strength and rigidity where needed. Our product line is manufactured in multiple locations across North America to help reduce customers' transport costs.

All products are CARB (California Air Resource Board) - exempt and free of any urea-formaldehyde resins.
